01 / A BRIGHTER FAMILIAR WORLD

The joy of Trickster.
Every action, felt.

A warm, painterly 2D isometric fan reimagining: recognizable adventurers, inviting towns and the pleasure of discovery, with deliberate posing and sharply readable action.

Trickster identity | Hades-inspired action clarity | AI art production | Independent review

AI visual exploration, not an approved Bunny model sheet, canonical map, or production asset. Costume consistency, town fidelity and camera calibration still need work.

THE EMOTIONAL TARGET

Sunlit storybook adventure with a dangerous heartbeat.

Combat has intensity. Exploration has breathing room. Drilling and finding something wonderful have their own rhythm.

01

Recognize

Keep verified character landmarks, place identities, class fantasy and playful creature charm.

02

Feel

Use compression, decisive contact, recoil and clear recovery. Effects reinforce the action instead of covering it.

03

Return

Make town, companions and drilling as appealing as the fight. The world should feel worth staying in.

Package status: a detailed proposal and downstream handoff. No final art is accepted, no animation route is qualified, and no combat implementation is included.

02 / PRESERVE THE SOUL

Familiar identities.
New expressive range.

This is a direct fan remake, as requested. Canonical reference comes before final redesign approval. Modernization should strengthen the identity people remember.

PRESERVE	MODERNIZE	TEST LATER
Animal-associated adventurers and class families	Coherent model sheets, materials and action silhouettes	Aim/move separation; readable skill access
Coral Beach and Megalopolis	Painted modular scenery, deliberate depth and composition	Camera, visibility and occlusion behavior
Drilling, discoveries, equipment and pets	Grounded tool animation and distinctive reward feedback	Interruption and interaction pacing
Welcoming social spaces	Portraits, relaxed idles, emotes and legible UI	Crowd and remote-player visual budgets later

Power · Bunny / Buffalo

Compact load, planted contact, strong recoil. First playable art candidate: Bunny with one verified outfit and weapon interpretation.

Magic · Sheep / Dragon

Readable focus, release and recovery. Magic has a clear core and boundary rather than constant luminous fog.

Sense · Fox / Lion

Precise gesture and equipment handling. Aim, discovery and tool use need distinct silhouettes.

Charm · Cat / Raccoon

Welcoming idle, grounded protective gestures and confident presence. Charm should express agency in motion.

Family associations and historical interpretation are prior-knowledge synthesis awaiting reference verification. Proposed motion/gear are design studies, not authenticated original mechanics.

> **Canon-versus-modernization matrix:** for every costume, skill, monster role and landmark, record what is verified, what deliberately changes and what remains unresolved. Proposed evade and elite behavior do not become canon by appearing in a concept.

03 / SUNLIT INK AND PAINT

Broad shapes. Selective detail.

Confident contour hierarchy, warm light, cool occlusion and tactile materials. Save detail for places the eye should go.

Warm ground

Coral
#E98070

Sea teal
#2AADB4

Deep ink
#233B52

Sun gold
#D5A64B

Skill cyan
#81D5E8

Hostile accent
#D94C49

Friendly accent
#92B69A

Quiet floor, clear subjects

Sand and paths carry low-contrast texture. Faces, hands, weapon edges, threats and interactables have clearer structure. High-frequency ornament stays mostly at the scene edges.

Materials with restraint

Large matte cloth folds; decisive metal accents; sculptural coral and rock; broad water bands. Avoid photoreal noise and uniform shiny rendering.

Characters first

Verify ears, hair, costume blocks, hand policy and gear landmarks. Compare original proportions to a moderately taller action silhouette; approximately five heads is an optional study, not approved anatomy.

Painted light baseline

Broad upper-left light and separate contact shadows. Qualify one dynamic-light/normal-map sample before multiplying it across the library.

CALIBRATION PROPOSAL	MEANING
2:1 dimetric ground	Basis (64,32), (-64,32); 128×64 reference diamond. Parallel projection, no perspective convergence.
1920×1080 reference	Review again at 1280×720. Actual readability matters more than source resolution.
512×512 actor source	Fixed foot anchor (256,420). No per-frame scale or camera changes.
320px body → 144px display	Scale 0.45. Height means foot anchor to skull crown; excludes ears/headgear. Full canvas displays at 230.4px.
Eight view references	Screen-space e, se, s, sw, w, nw, n, ne. Animation direction count remains a qualification decision.

All numbers are provisional targets for a later diagnostic scene. A painted concept board does not validate this camera or scale.

04 / ACTION WITH INTENTION

Pose carries force.
Effects carry meaning.

An anticipation, a clear contact, a visible recovery. Responsive combat depends on phase timing, input and transitions as well as the drawings.

01 **Load**

Compress the silhouette and establish the direction. Body tells and enemy ground warnings agree.

02 **Contact**

Use decisive extension and a brief, localized accent. Show which target was hit without hiding the threat.

03 **Recover**

Make weight and commitment visible. Supply exit/interruption poses; cancellation rules remain prototype data.

Movement and aim

Eight facing views do not automatically solve strafing. Test backpedal/strafe motion or document a deliberate turn policy. Ground contact must agree with travel speed.

Enemy intelligence made visible

Notice, pursuit, reposition, windup, attack, recovery and interruption each need cues. Coordination should prevent a pile of indistinguishable overlapping warnings.

Drilling has a full arc

Plant → steady loop → resistance → reveal → retrieve → celebrate. Include abort and return-to-neutral. Keep the shaft and hands coherent at the ground contact.

Threat before decoration

Hostile boundaries use pattern, geometry and activation motion as well as color. Friendly effects, companion sparkles and loot yield visual priority.

THE PRODUCTION BOTTLENECK

A lovely keyframe does not prove a coherent animation.

Test controlled frame generation, layered 2D animation or AI-created rigged 3D sources rendered to sprites—only if the actual tools can deliver them. Compare the same small action/view set before selecting a route.

ILLUSTRATIVE SIX-ACTION ESTIMATE	FRAMES PER FACING
Idle / run / dodge	6 + 8 + 6
Attack / hurt / drill	10 + 3 + 8
Total at eight directions	**41 × 8 = 328 frames**

Not a complete slice budget: skill, defeat, discovery/abort, companion and enemies add more. Frame count is not combat duration. At uncompressed RGBA8, 328 full 512^2 frames alone occupy 328 MiB before mipmaps/atlas padding; source resolution is not automatically the shipping export resolution.

05 / PLACES WORTH INHABITING

The fight is one rhythm. The world has others.

CORAL BEACH / FIRST FIELD

Room to fight and discover

Verified coastal motifs, quiet traversable sand, a clear return path, a combat clearing and a calmer drilling pocket. Scenic palms and coral frame the action.

Ground, shoreline, cliffs, transitions, occluders, props and drill surfaces must form a reusable kit. The new layout is a proposal until compared with canonical references.

MEGALOPOLIS / SOCIAL STUDY

Make home recognizable

Verify architecture, landmarks, NPCs and palette before producing a town kit. Relaxed poses, discoverable shops and comfortable scale support the social mood.

The board's marketplace is a mood exploration, not authenticated Megalopolis. P1 covers a study and future kit plan, not a full playable city.

The map kit needs technical meaning

- Ground anchor
- Visual bounds
- Ground footprint
- Traversal guidance
- Occluder policy
- Adjacency rules

Companions and finds

One verified companion with idle, follow, affection and discovery response. Ordinary and special finds have distinct feedback without constant spectacle.

A readable modern interface

Live text, restrained frames, clear skill status and contextual drill/interaction feedback. Icons must read at 32/48/64px and work beyond color alone.

> **Future coverage is planned, not commissioned:** other regions, towns, heroes, bosses, equipment/cosmetics, portraits, quests, maps, collection systems, social UI and marketing art each have downstream brief coverage. No full-world asset multiplication before the slice passes.

06 / THE COMMISSIONING MAP

One complete loop.
Then a disciplined expansion.

61 planned batches cover qualification, the playable art slice and later expansion. These are task groups—not 61 finished assets, and not an approved production count.

P0 / PROVE

Direction & capability

Canon references, comparable treatments, Bunny source, a tiny motion trial, terrain/VFX/UI pilots and camera/import calibration.

P1 / COMPLETE

Bunny at Coral Beach

Two enemy roles, an elite, one companion, drilling/discovery, minimal HUD and a Megalopolis mood study.

P2 / PLAN

World & roster

Seven more heroes, regions, bosses, gear, NPCs and UI systems. Concept matrices first; bulk production later.

61 of 61 planned batches shown · all remain planned, not generated

07 / PARALLELIZE FAMILIES, PROTECT CONSISTENCY

More agents after fewer unknowns.

The fastest reliable route is to resolve shared style and motion risks once, then give workers coherent families to produce. Splitting Bunny's frames across independent agents too early multiplies drift.

01 **Reference and direction**

Clear the pilot's canonical dependencies. Compare treatments using matching crops and scale. Other roster research can run independently.

02 **Tiny route screen**

Same hero: idle, run and attack in SE/NW plus E/W handedness evidence. Compare only available methods; select a viable route.

03 **Broader pilot and shared freeze**

Qualify direction coverage, dodge, hit, drilling, terrain, telegraph, impact and UI. Assemble actual-size scenes, then freeze camera, scale and file contracts.

04 **Bounded family production**

One enemy plus its full state family; one biome kit; one skill across phases; one UI component family. Each consumes the same approved source versions.

05 **Independent acceptance and integration**

Technical checks, art review, gameplay review, then coordinator acceptance. Rejected candidates never quietly enter exports.

SEVEN CONCURRENT SLOTS	RESPONSIBILITY
1 · Coordinator / art director	Bible, versions, dependency graph, scope and final acceptance
2 · Game design / implementation lead	Action/AI/interaction semantics, gameplay review and technical continuity
3 · CHAR	Hero, monster, companion and NPC source/reference families
4 · ENV	Modular environment kits, props and scene composition
5 · ANIM	Tool qualification, coherent actions, export and playback evidence
6 · VFX / UI	Separate briefs executed sequentially as dependencies permit
7 · Independent REVIEW	Technical/art evidence and defect reports; no self-approval

> At dual-review gates, pause/reassign a domain worker to review a family they did not create. Independent technical and art reviews need separate judgments, not an eighth concurrent slot. Keep unaffected work moving; do not fill slots with premature content.

08 / REVIEW IS A PRODUCTION STAGE

Evidence before acceptance.

A producer self-checks. Independent reviewers inspect the entire batch. The coordinator accepts only after technical, art and gameplay gates agree.

<details open>
<summary>Gate A · Reference and visual direction</summary>

Verified canon dependencies, comparable direction boards, actual-size silhouettes and a single coherent direction. Current package: not passed.
</details>

<details>
<summary>Gate B · Tool and import qualification</summary>
</details>

<details>
<summary>Gate C · Shared composition freeze</summary>
</details>

<details>
<summary>Gate D · Family acceptance</summary>
</details>

<details>
<summary>Gate E · Assembled slice</summary>
</details>

Technical review

Files, dimensions, alpha fringes, crop, pivots, frame order, direction map, import settings, atlas bleed and decoded memory. Source/provenance and transforms remain traceable.

Art review

Canon fidelity, anatomy and costume landmarks across all views, material consistency, camera, edge hierarchy and actual-size readability.

Gameplay review

Foot sliding, reach, tell/contact/recovery, transitions, overlap, tall props, drilling contact and companion priority. Stills cannot establish temporal quality.

Bounded rework

Initial candidate plus two targeted correction rounds. Then revise method/scope or reopen the contract. Keep reject evidence; never run unchanged prompts indefinitely.

AN ACCEPTANCE QUESTION

Where am I? What is about to hit? Where is safe? What did I hit? What can I discover?

If motion cannot answer those questions, the asset does not pass because its poster looks beautiful.

09 / EVIDENCE AND OPEN DECISIONS

Know what we know. Label what we propose.

Verified

Official Godot 4.6 documentation source: sprite animation, TileMaps/TileSets, image import, 2D lighting, renderer differences and sorting APIs. Eleven source snapshots and hashes are archived.

Godot 4.6.3 passed the earlier headless engine smoke check. This does not validate graphics, art import or game behavior.

Not yet verified

Canonical costumes/maps/monsters, exact historical systems, Hades footage/timings and animation-tool production capability. Primary reference sites tried returned proxy 403.

No proprietary Hades pipeline or measured timings are claimed. Family/history descriptions are explicitly prior-knowledge synthesis.

DECISION	CURRENT PROPOSAL	CLOSE WITH
Canon era and visual variants	Base-character recognizability first	Source pack + knowledgeable-player review
Animation route and direction count	Eight reference views; route qualification first	Same action/view bake-off and playback
Proportions, camera and scale	Compare fidelity/action silhouettes; provisional 2:1 grid	Actual-size Godot calibration
Dynamic light and normal maps	Painted baseline, one optional sample	A/B appearance and cost
Skills, evade and enemy redesign	Tunable prototype, explicit fidelity matrix	Interactive design review

DECISION	CURRENT PROPOSAL	CLOSE WITH
Gear and online expansion	One fixed outfit, stable asset IDs	Gear-swap feasibility and later separate network design

Verified sources are official godotengine/godot-docs 4.6 snapshots, not search snippets. The cutout tutorial marks itself outdated; use it as conceptual documentation and verify APIs in the engine. Historical reference research remains a real fidelity dependency.

10 / READY TO COMMISSION, AFTER GATES

Give each agent a bounded contract.

The package supplies full content briefs and copyable role prompts, not just mood words. Each worker knows what to produce, what must stay fixed and what evidence is required.

Art-generation handoff

Read the bible, clear the batch's references, attach the calibrated contract and use B00–B10 with CHAR/ENV/ANIM/VFX/UI role prompts.

Content briefs →
Copyable role and reviewer prompts →

Technical handoff

Single-player Bunny/Coral Beach slice with state-driven visuals, readable enemies, drilling, companion and diagnostic scenes. Future networking stays a separate scope.

Full implementation kickoff prompt →
Game design companion document →

The minimum production contract

```
ROLE + BOUNDED ASSET FAMILY
Player-facing purpose and fidelity requirements
Approved reference IDs / bible version / camera contract
Exact outputs, directions, states, dimensions and alpha
Foot origin, attachments, phases and footprint semantics
Qualified generation route + source/prompt/edit history
Full contact sheet + actual playback + game-scale composites
Self-check + known defects → independent review
No self-approval; only accepted exports enter runtime
```

Next useful action: close the pilot's canon-reference gaps, compare directions, then run the tiny animation-route screen. Do not commission the entire roster from this one exploratory board.

▶ **Read the complete technical kickoff here**
